

## Assignment 2

**Deadline:** February 23, 2019 11:59 PM

The main goal of this assignment is to get you introduced to one of the various Blockchain platforms out there. Komodo Platform is a good place to begin with. Here is what you need to do -

1. Setup the environment to generate a Blockchain on Komodo platform.
2. Create an address, wallet and add funds to the same. Test coins will be fine.
3. Send a transaction between wallets on the Blockchain.

**Note:** Please join the following discord channel for developers so you can interact with the Komodo development team (Let them know that you are from UTA and that you are my student from Blockchain class): <https://discordapp.com/invite/53M27QD>

**Deliverables:** You need to take screenshots of your work, prepare a word document, and submit the word document through Blackboard. Also, you need to demo your work to the TA.
